

4 Profile · plan & billing · theme — in 1a Quiet Ledger

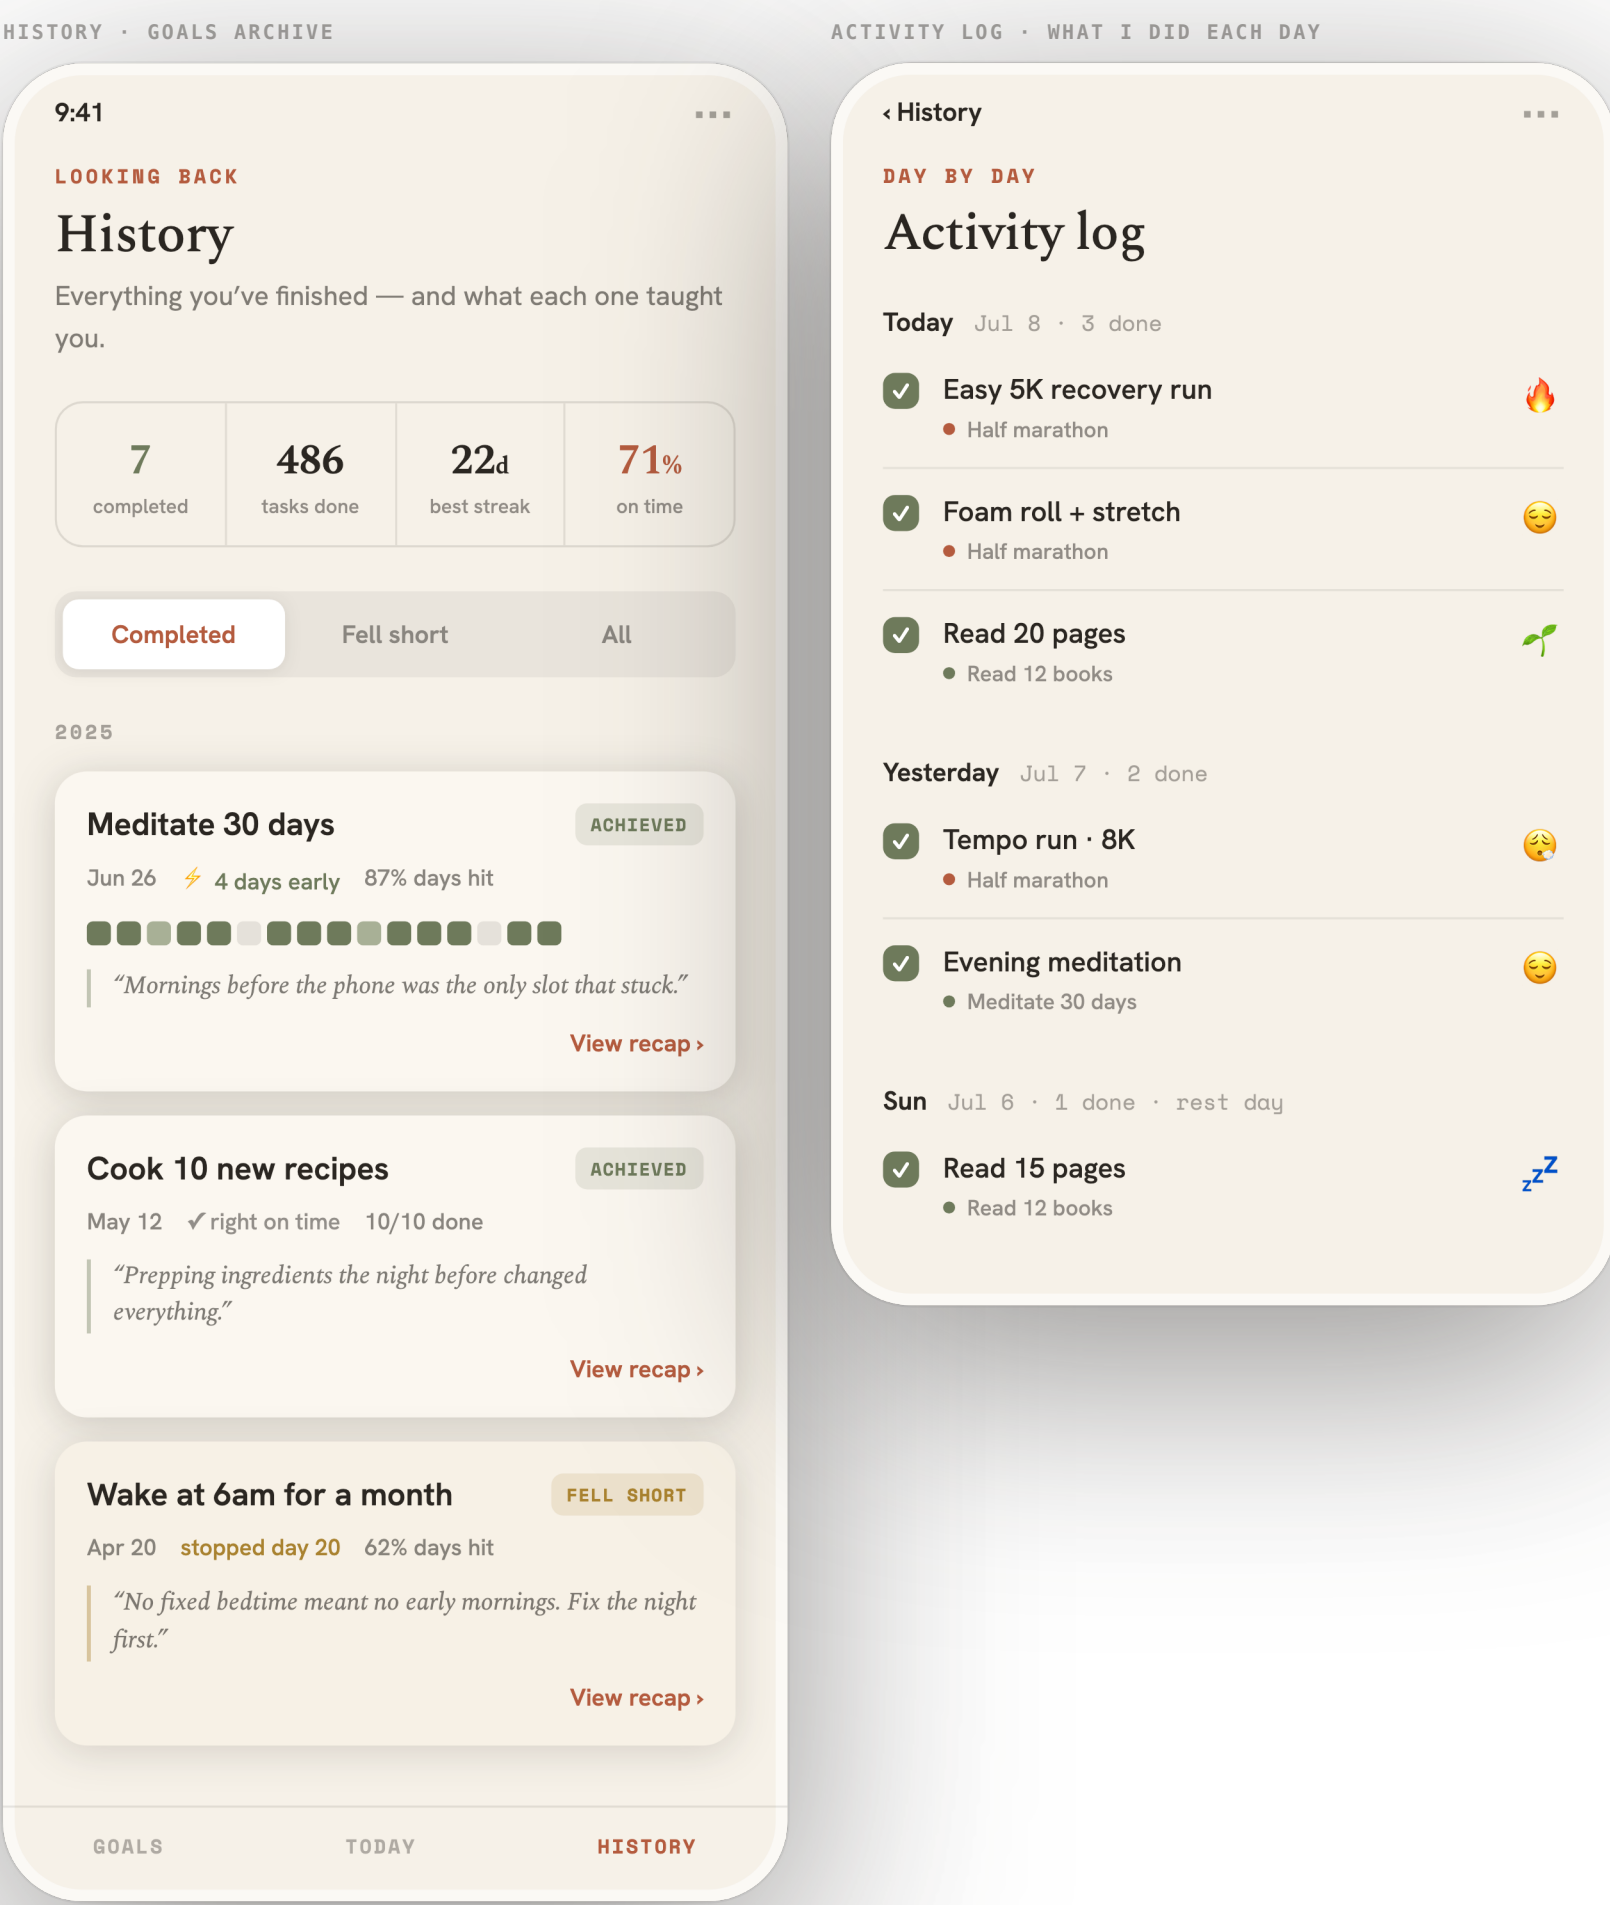

4a Profile. Tap the avatar to open it — account, free-trial status with an upgrade path, and a live theme picker (switch appearance, style & accent). Built in your chosen Quiet Ledger direction.

Try next: "add an avatar upload & edit-profile screen" · "add a payment / checkout screen after Upgrade" · "show what Dark mode looks like" · "add a Teams / family plan"

5 History · finished goals archive + daily activity log

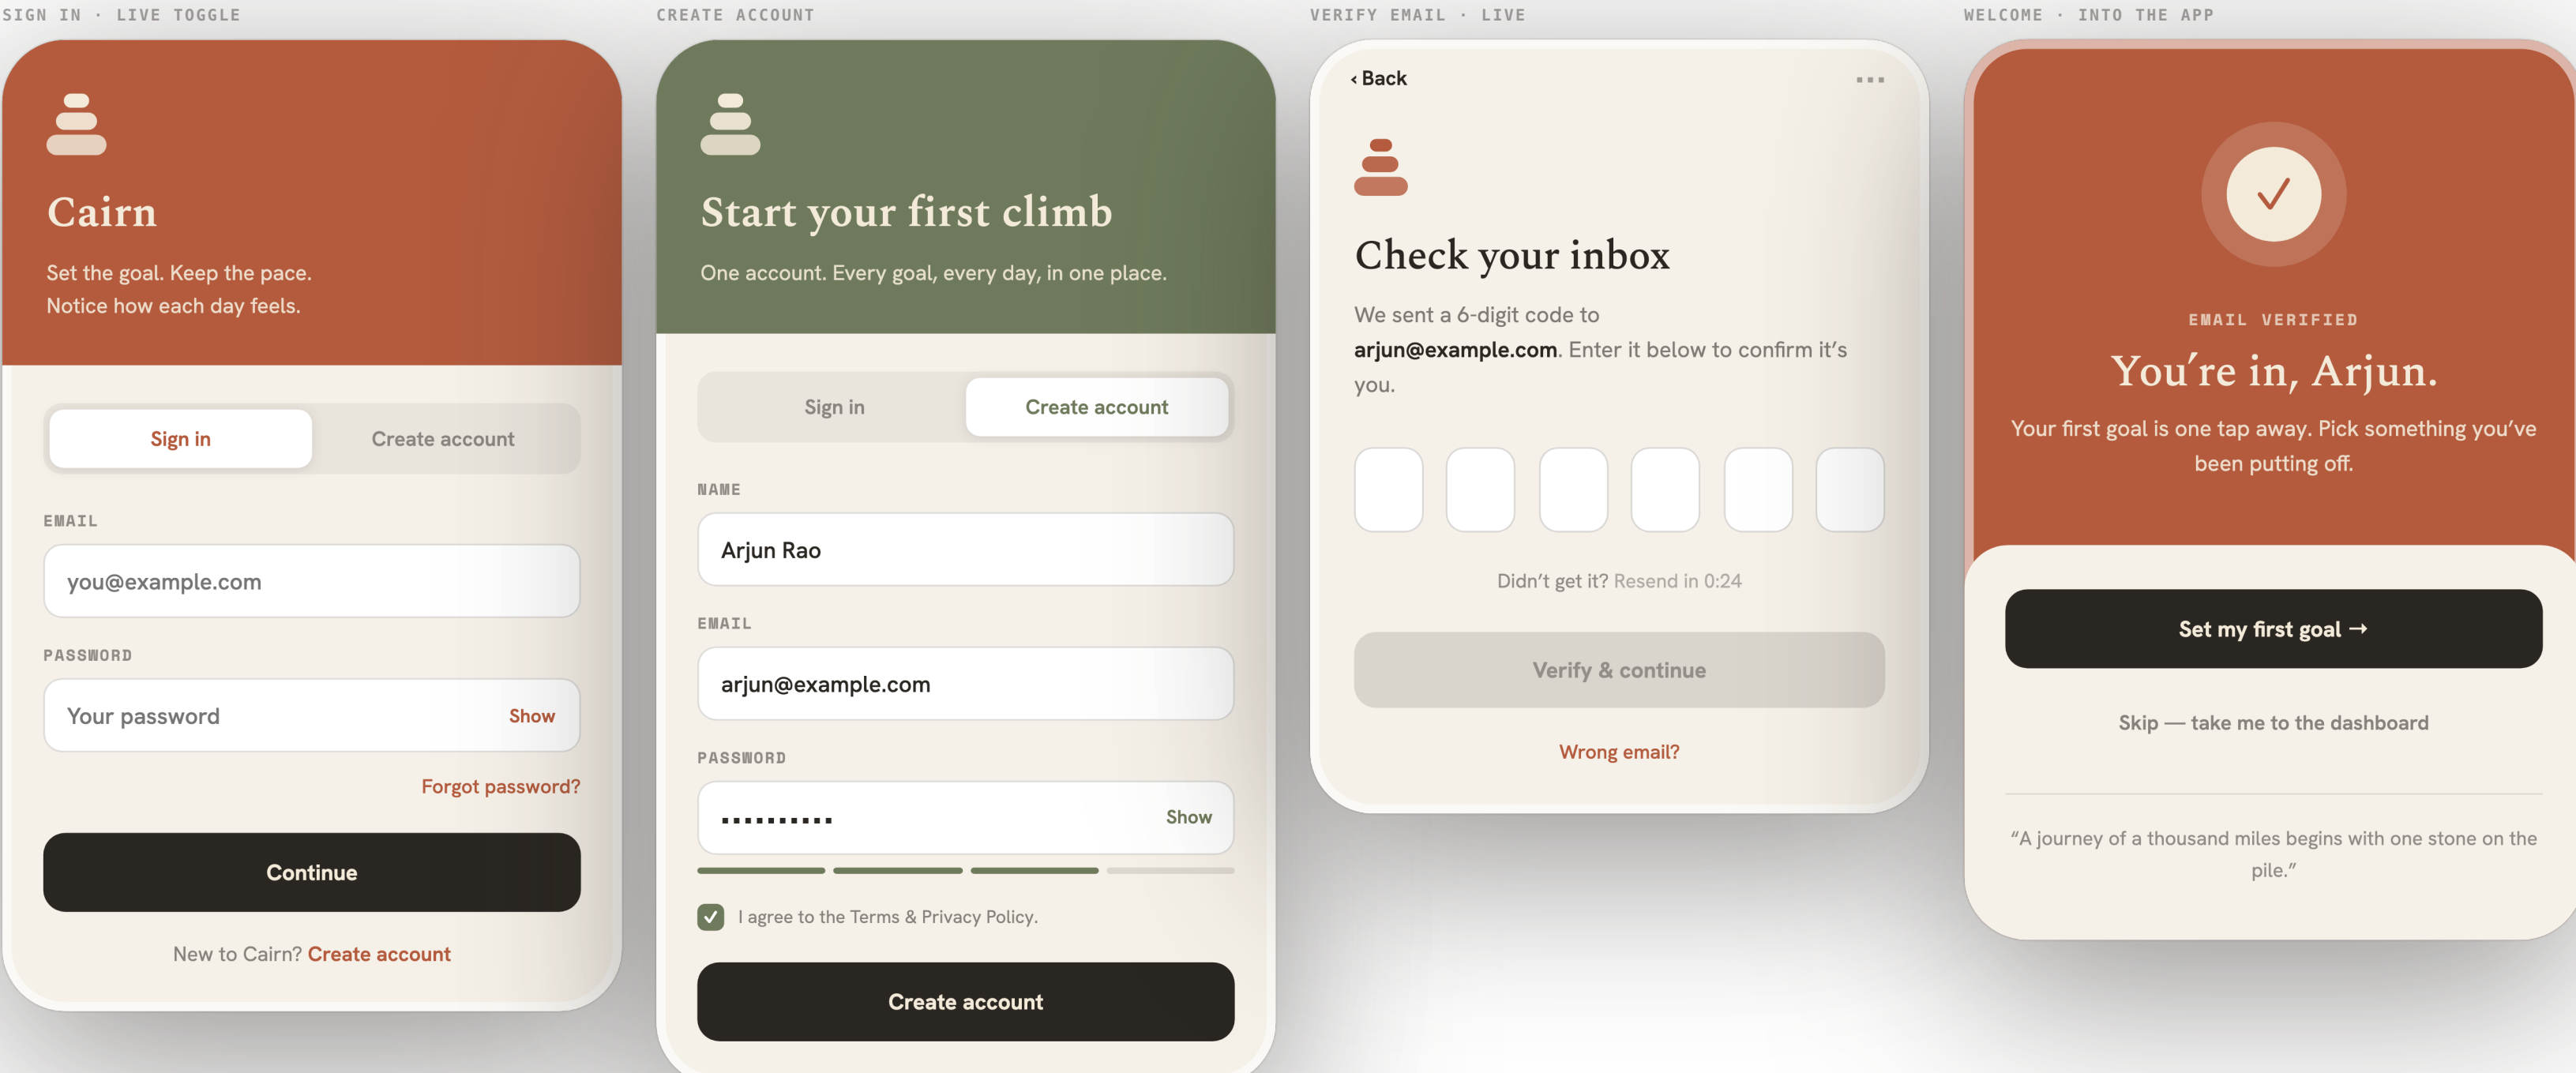

5a History & archive. Every finished goal with its outcome, how fast you hit it, days-hit rate and the 1b reflection snippet — plus a reverse-chronological log of completed tasks (the "what I did each day" track), with the emote you left.

Try next: "open the full recap for a finished goal" · "add a calendar / heatmap view of the activity log" · "let me filter history by year or goal" · "show a 'this month' summary card"

6 Auth flow · "Cairn" · sign in / create account · email verification

6a Email + password auth. Branded "Cairn" wordmark so the app is felt from the first screen. Live — toggle Sign in / Create account, show/hide the password, and type the 6-digit code (auto-advances). Re-skins to whichever direction you pick.

Try next: "re-skin the auth to match 1c Trailhead" · "add Google / Apple sign-in too" · "add a forgot-password reset screen" · "show the desktop split-screen login"

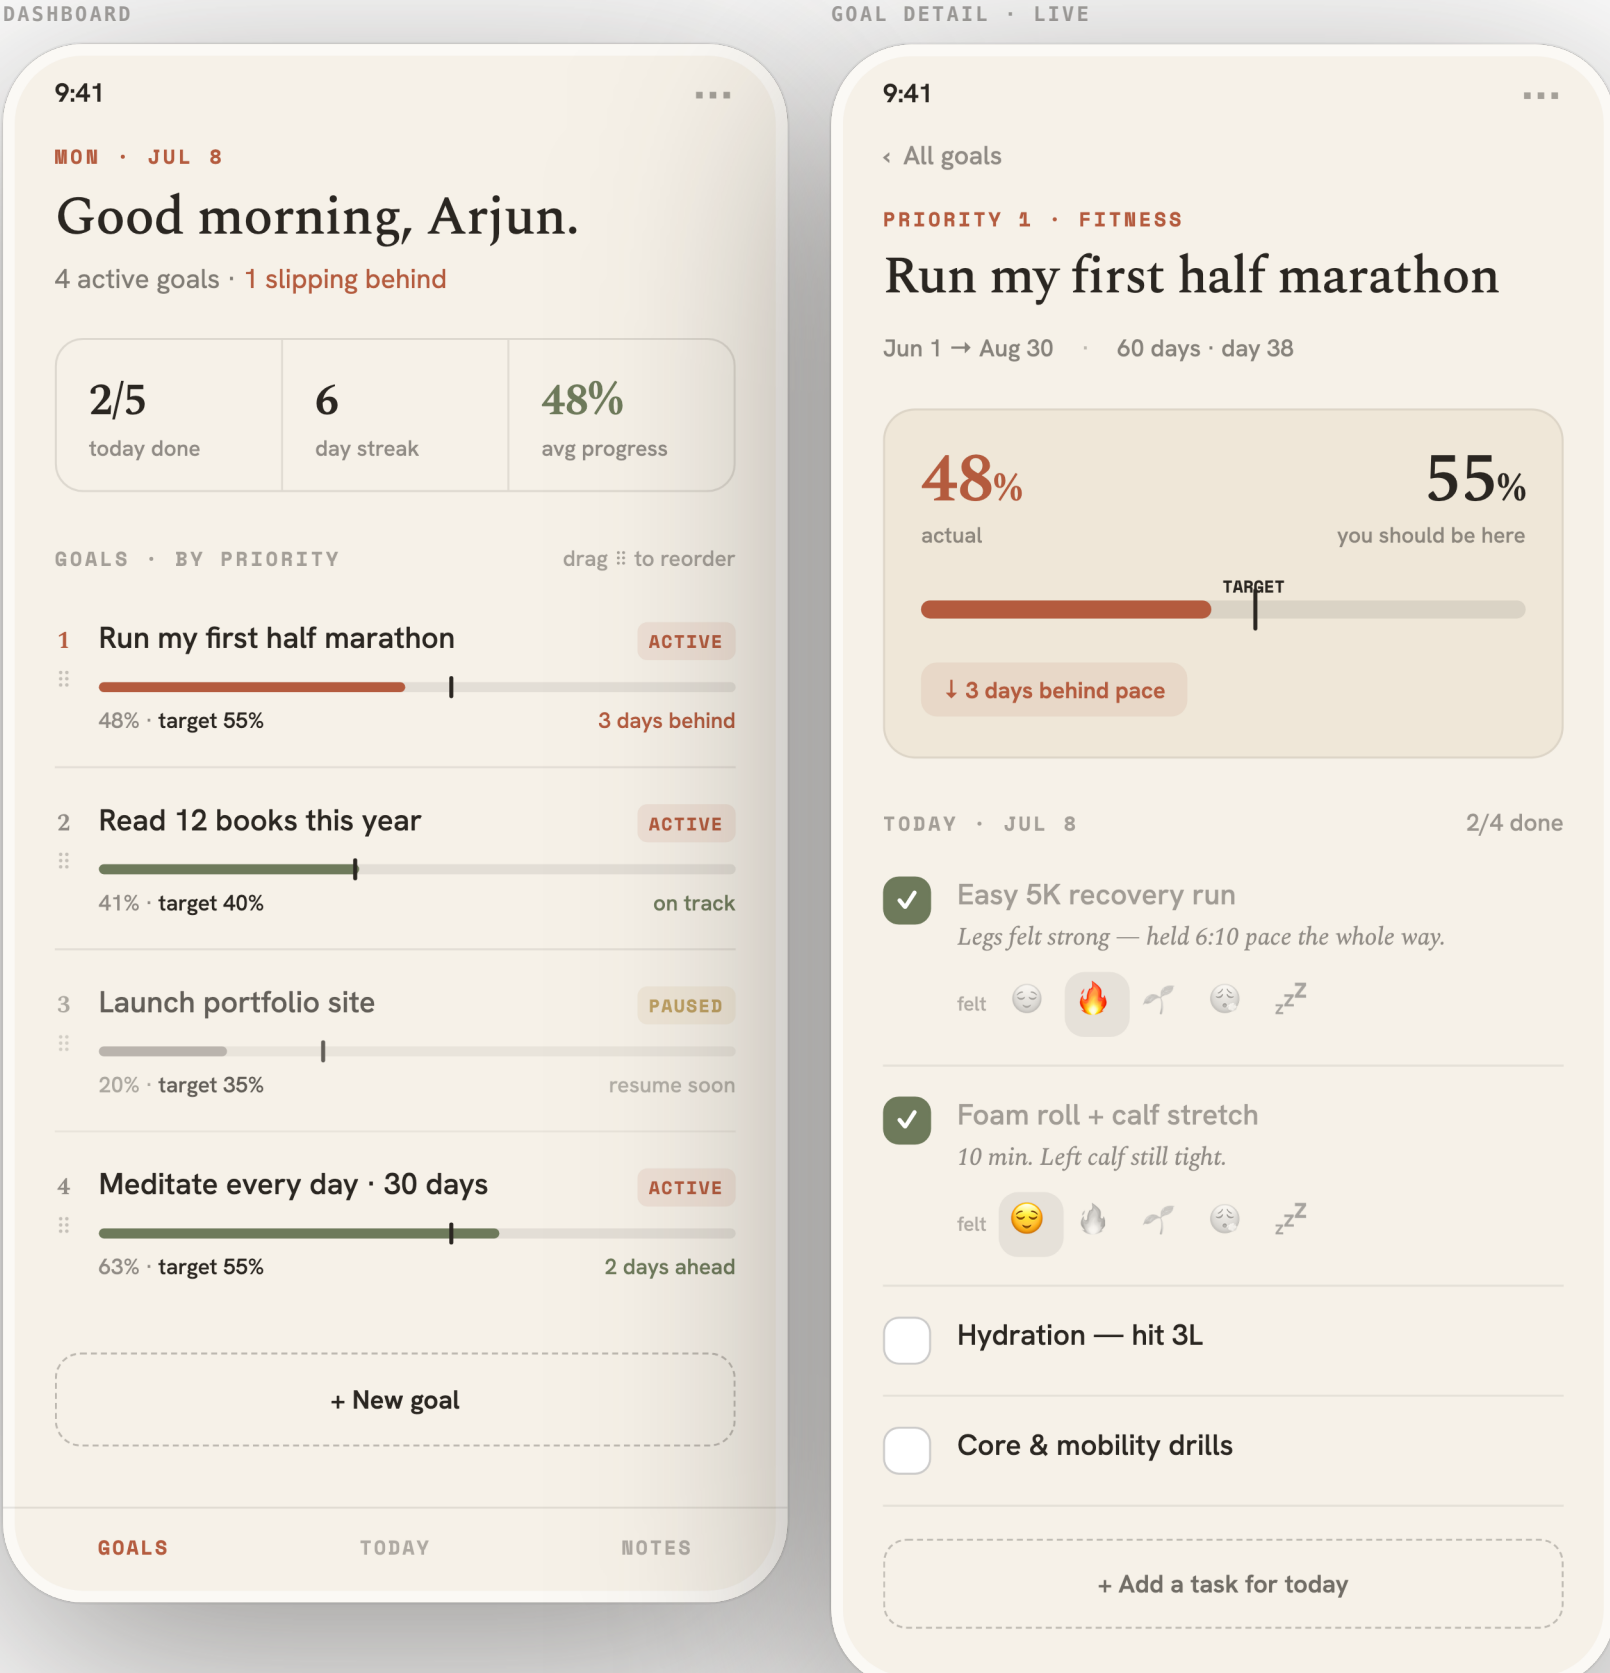

GOAL TRACKER · ROUND 1 · 3 DIRECTIONS

Track the goal, the pace, and how each day actually felt.

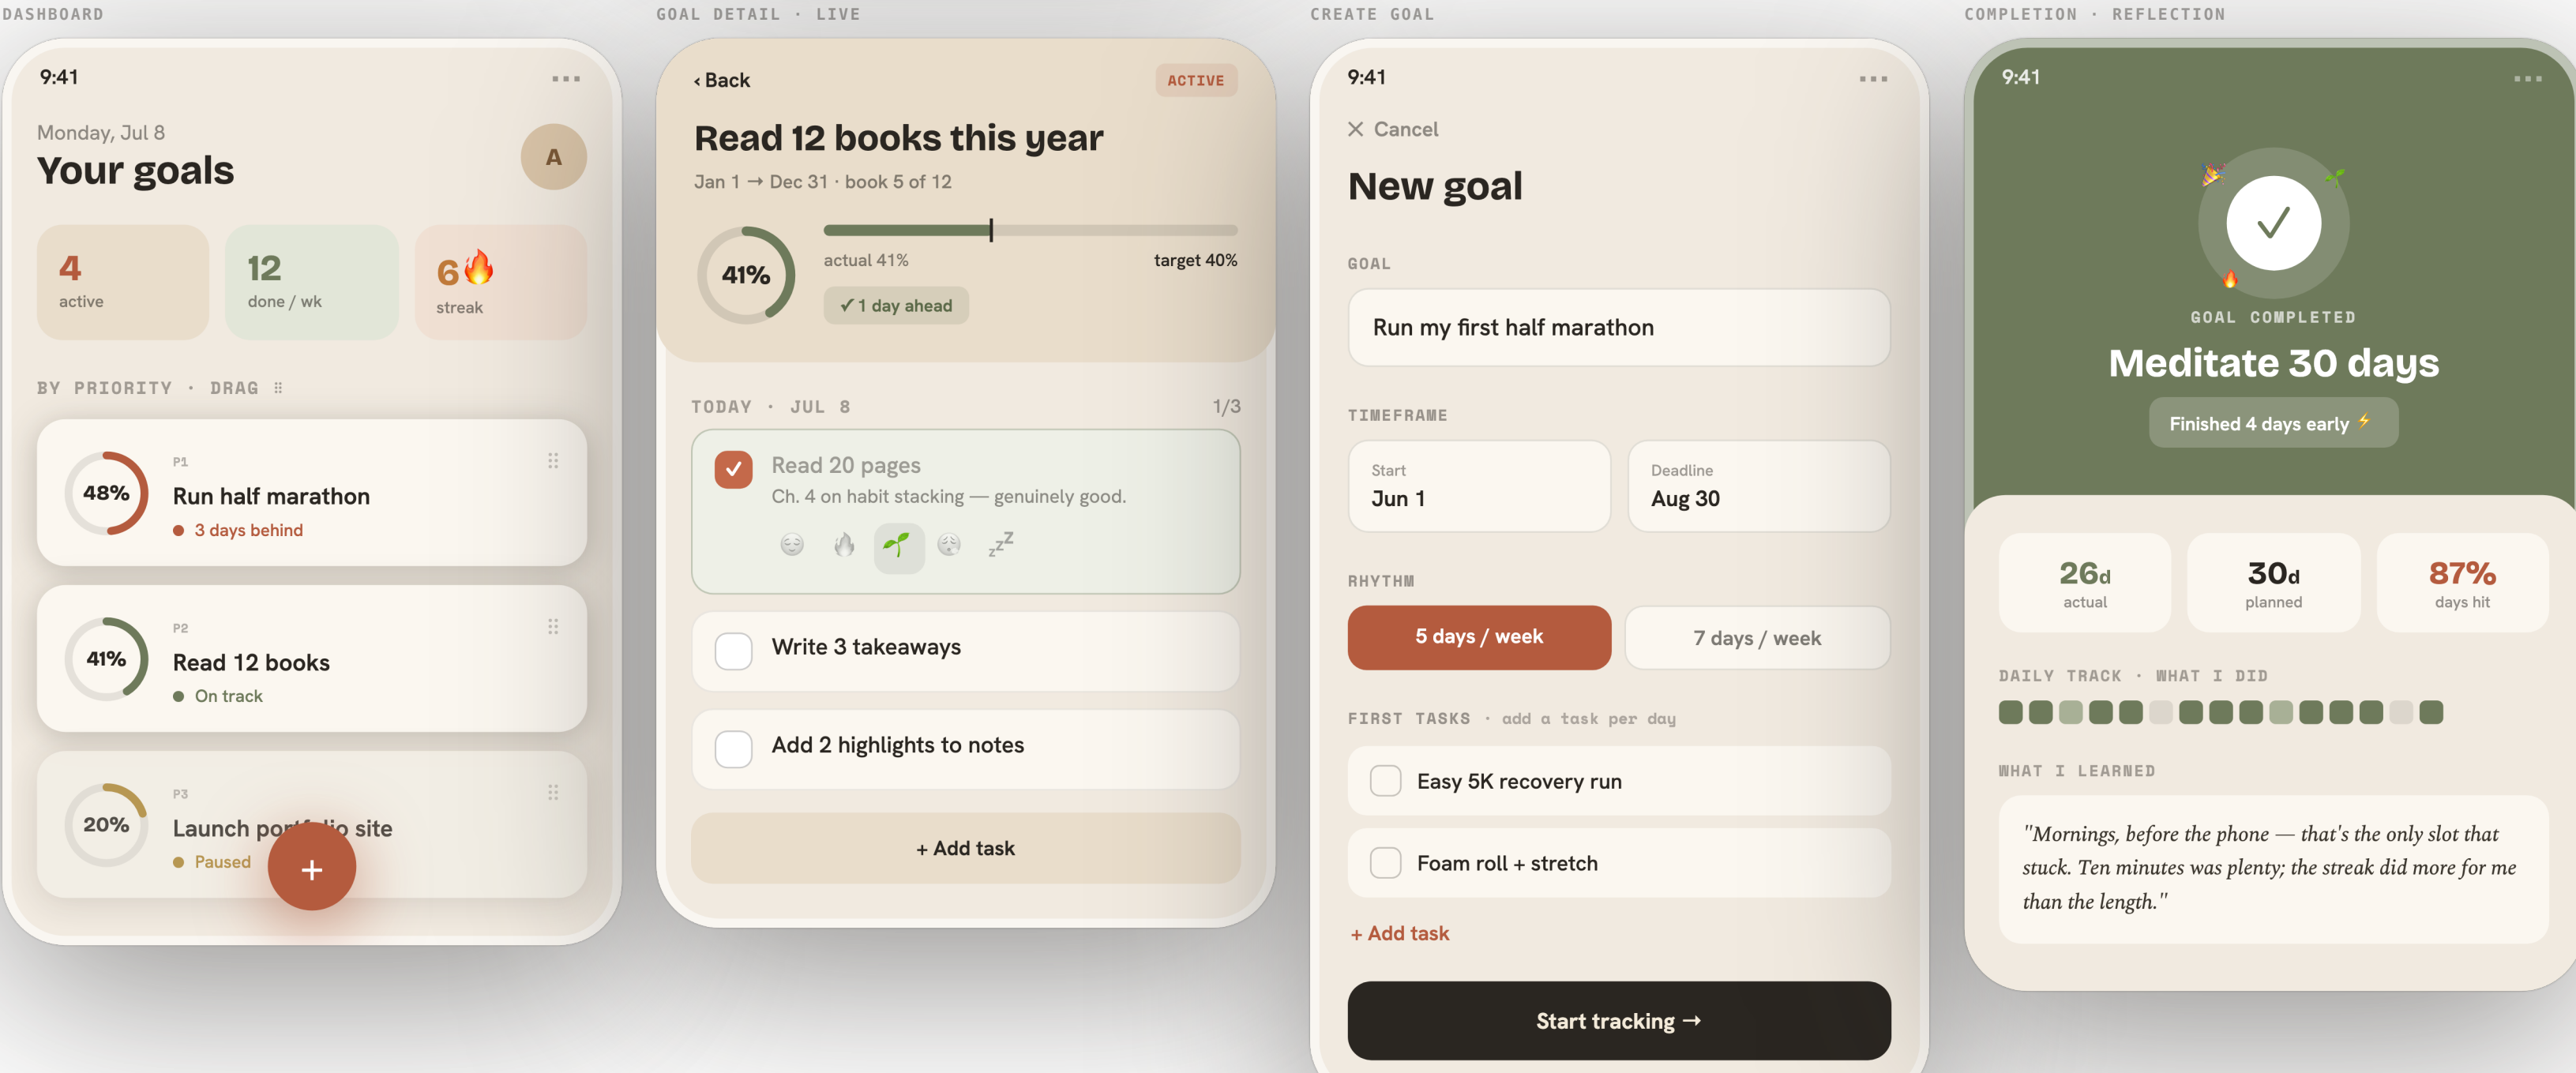

Warm, calm, minimal — shown as mobile (adapts to a wide two-pane layout on desktop). Every goal carries a single progress track with a "should be here" marker so projected vs actual reads at a glance. Priority is **drag-to-reorder**. Emotes are optional per task. **The Goal detail screens are live** — tick a task to feel the check-off, then react with an emote.

7 Three directions · Dashboard + Goal detail (1b also has Create & Reflection)

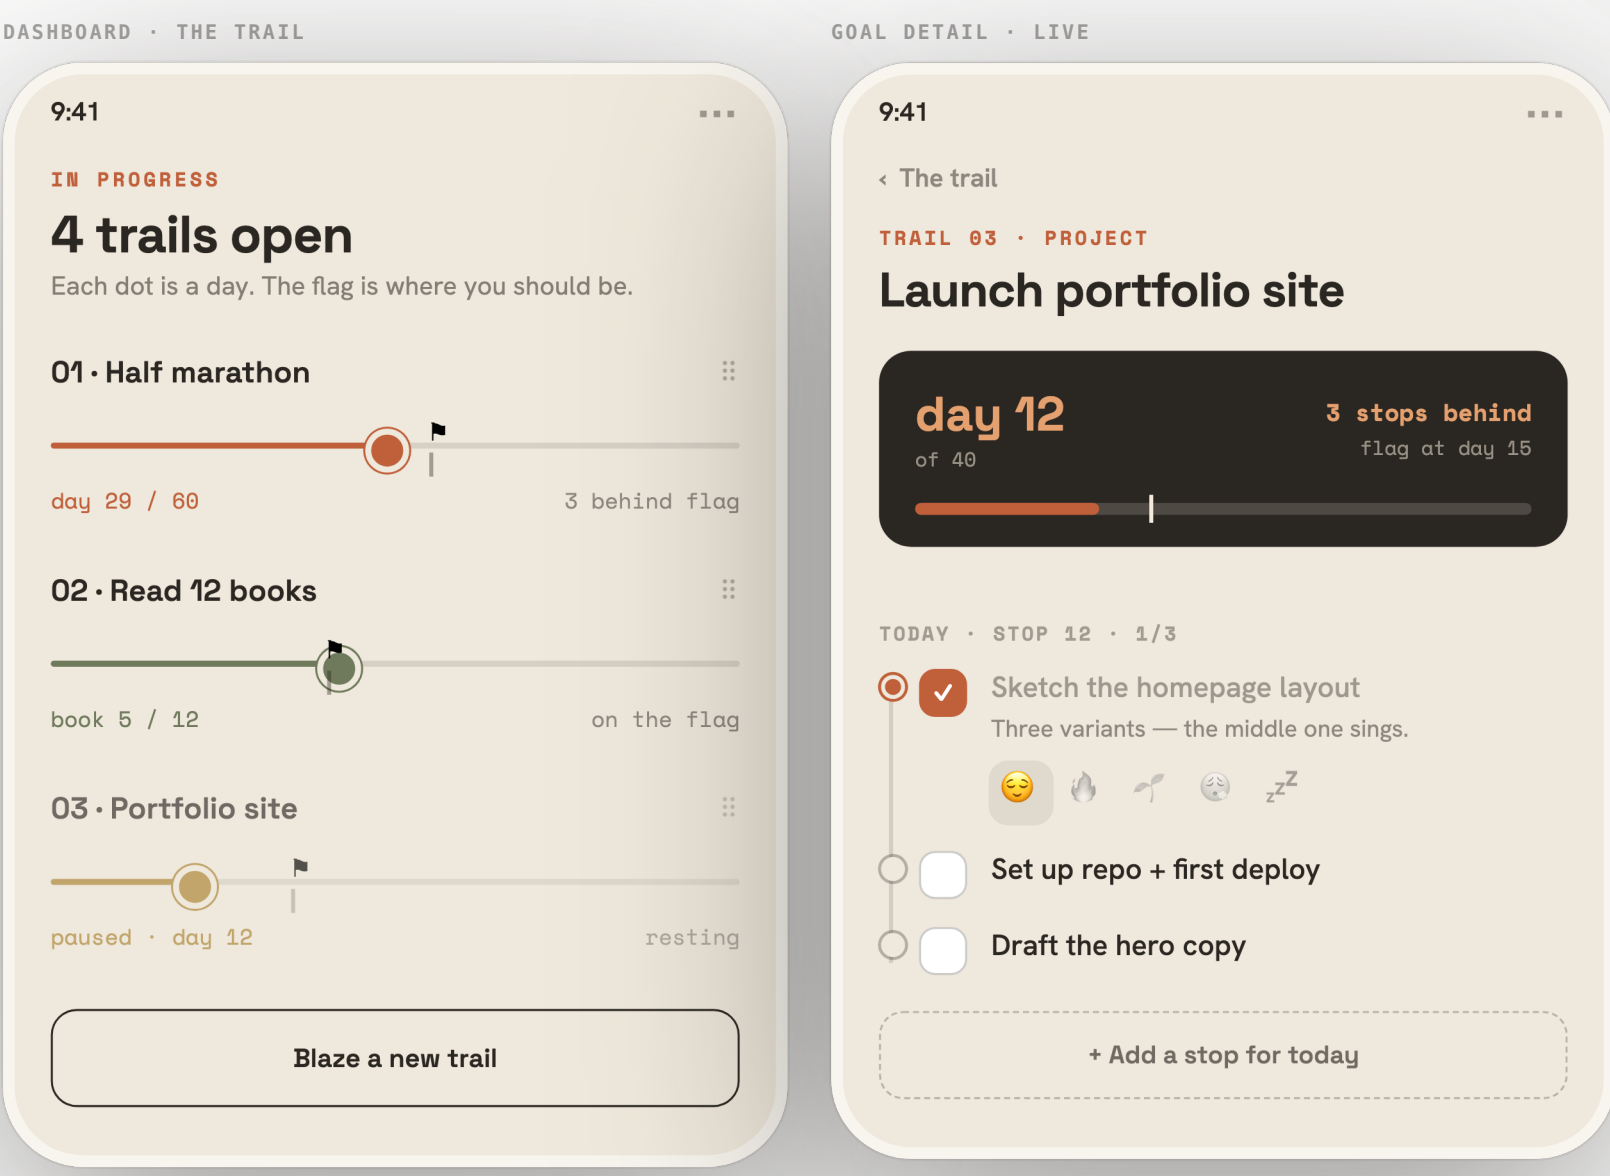

7a Quiet Ledger. Editorial & restrained — Spectral serif, one clay accent, hairline rules. Reads like a considered notebook, not an app.

7b Soft Cards. Warmest & friendliest — Bricolage display, tinted cards, circular progress rings, status by colour. Full flow: Dashboard → Detail → Create → Reflection.

7c Trailhead. A journey metaphor — each goal is a path, days are stops along it. Space Grotesk + mono, a pace flag that sits ahead of or behind "today". More novel, still calm.

Try next: "flesh out 7a with the Create & Reflection screens too" · "make 7c the direction, but warmer like 7b" · "show the desktop two-pane layout for 7b" · "new directions for the dashboard"
